集成电路原理与设计

宋爽 陈一宁 2024年12月

Exercise 8

- 8-1 Sketch 3-input gates $F = (A \cdot (B + C))'$ using each of the following circuit techniques:
 - (a) Static CMOS.
 - (b) Pseudo-nMOS.
 - (c) Dynamic Gates.
- 8-2 Consider the circuit of Fig 8.1.

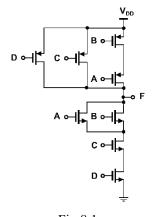

Fig.8.1

- (a) What is the logic function implemented by the CMOS transistor network?
- 8-3 Implement the functionS = ABC + AB'C' + A'B'C + A'BC', which gives the sum of two inputs with a carry bit, using NMOS pass transistor logic.
